

## Assignment GUI

### SECTION A

1. Graphic Design is not only making things nice but It is also making thing so informative and it creates the story inside the website and it also make its stragetetic information
2. It helps to know the purpose of the website it helps to descion making like deciding colors to use
3. I don't know
4. Flat design doesn't show or go deep in designing but Material Design go deep in designing and add good colors better effect like button hover , etc
5. They may act as attention to a user also it may make a button more visible , etc
6. For example when a website when you are going to scroll and when you scroll down page go down that's very confusing which can lead to unattractiveness
7. First is easy access to all, expanding the reach of a website, designing for where everyone can fit in,etc..
8. It means using special things or behaviors to a website to create a good experience. It is important because it helps user to learn and navigate interfaces easily.

### SECTOIN B

1,a, I would apply a high contrast light colors to make it more visible and nonchallenging to find and I would make it bigger than other secondary buttons

B,I would make that a button hovers(changes color) and also automatically send confirmation message

2, yo may use the camera icon to make it more visible and give it a little text like "add a PHOTO" and also you can make the upload area more high contrast

3, it is because vector it is not made with pixels so no matter how you zoom in it is actually good no blurry thing and it is good for logos

4, the thing being ignored is poor visibility

- It can be fixed by adding high contracy
- Add clear boundaries with good colors

### **SECTION C**

1. C
2. B
3. B
4. A
5. B
6. A
