

My Assignment

Section 1:

1, a.,The role of:

A, HTML: this is used for external structuring of a web page and all the words or text needed to be seen on the web page Is written using HTML in summary is used to structure a web page.

B, CSS: this is used to design the web page and where it is different from HTML is that it is used to add colors to add another beaty of the web page and it comes to help to beatify the ones created by html

C,JavaScript: this is used to make a website to interact or function for the user and it is used for front- user interface so in summary it is used to make a website do it's function

B,these three often work together because they help each other in making of a web because first of all HTML is used to structure the external web page and then css just add the beaty and the colors and all things related to designing a web page and then finally Javascript comes to make a website

function for example: when making a calculator html helps with the structure and then css add colors to signs and then javascript helps in making calculations.

2, a,when a website has bad looking and all things all bad on it it makes the end users to hate it and hate the look of it and be unattractive but when an interface has a good looking a good structure and all things on it is good it helps end users love it and be attractive to all categories

B,- Clear and cool navigation

- Readable words or fonts

3, Importance of responsive web design

- It helps a website to work well fastly and securely because it has all features of a good website
- It gives a smooth and well experience on all devices because when a responsive web has all cool stuffs and it Is made smoothly it helps all devices to access it well on all sizes

Two css/design responsiveness is :

- Clear and good looking pictures

- When you add also good looking icons is good
- A cool flexbox
